Points of Interest

In combustible wood construction, found at Arbor Place of Lisle (right), concealed spaces exist. A common concealed space is between the ceiling of one story and the floor of the story above. The sprinkler code requires combustible concealed spaces to either be protected with sprinklers or the space to be filled with non combustible insulation. In this photo they are filing in a concealed space with non combustible fiberglass insulation. They apply a netting material to hold in the insulation and they blow it in through the tubing. The space must be filled to within two inches of the top.
